

[26] A method for using functional connectivity MRI to study development of the intrinsic functional architecture of the brain

Authors: Damien A. Fair, Nico U. F. Dosenbach, Jessica A. Church, Alexander L. Cohen, S. Brahmbhatt, et al.

Journal: NeuroImage, vol. 35, no. 1, pp. 396–405, 2007

DOI: 10.1016/j.neuroimage.2006.11.051

Direct URL: <https://doi.org/10.1016/j.neuroimage.2006.11.051>

Executive Academic Summary & Connectomic Relevance

Establishes resting-state functional connectivity methods to trace neurodevelopmental segregation and integration from childhood to adulthood.

Mathematical & Neurobiological Foundations

- $\Delta \text{FC}_{\text{development}} = \text{Segregation}_{\text{local}} + \text{Integration}_{\text{long-range}}$
